Walls	10
Features	12
Installation	14

Astyl introduces to Mexico an innovation that transforms the surface into an expression of light.

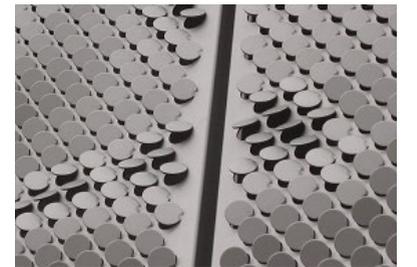

Architecture in motion.

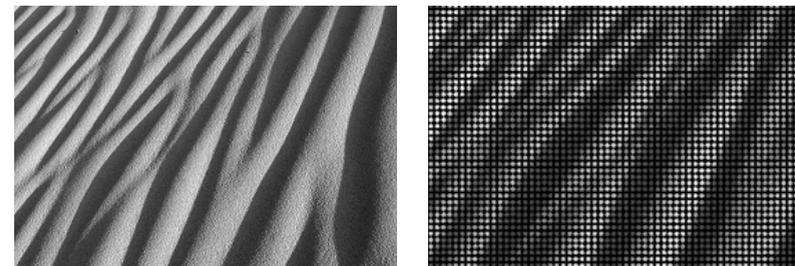

This Canadian innovation turns metal into a three-dimensional canvas. Through an advanced parametric process, each panel becomes an optical system capable of controlling reflection and revealing images that shift with perspective.

With millimetric precision, Ombrae merges art, engineering, and architecture to create surfaces that engage with light. Backed by Astyl's technical expertise, this technology redefines the relationship between material, environment, and visual expression.

Ombrae: sculpted light, image in motion.

06 Ombrae

Ideal for corporate, cultural, and residential buildings seeking a unique and recognizable presence.

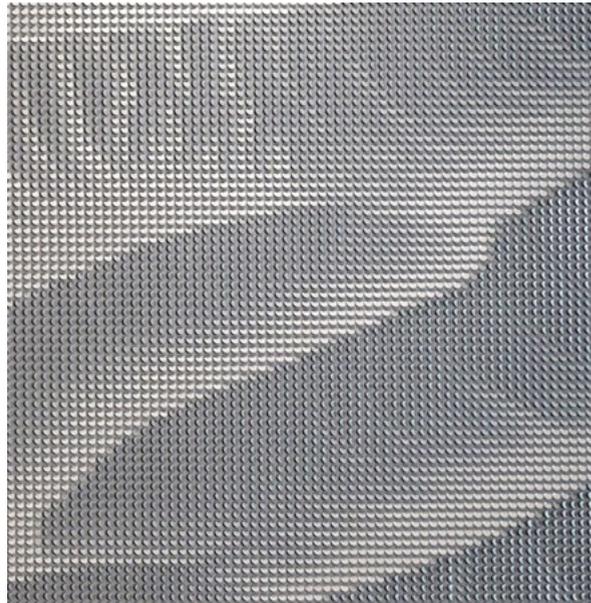

Ombrae adds depth and movement to all types of architectural facades. Its geometry creates a dynamic play of light and shadow that evolves throughout the day, while its structural design contributes to a distinctive architectural identity. An artistic and expressive solution for personalizing a building's image.

08 Facades

Perfect for contemporary interiors,
museums, and exhibition spaces.

Transforms flat surfaces into dynamic architectural elements. Ombræ generates rhythm and visual depth, elevating the aesthetic quality of both interior and exterior spaces. Each wall becomes a visual experience in motion.

Facades

Walls

The optical precision of Ombræe demands materials of the highest quality and surface uniformity.

Versatility that transforms.

Aluminum (AL)

Exceptional lightness and recyclability
Versatility in finishes and colors
Clean, contemporary aesthetic

Anodized

Silver

Noir

Bronze

Ash

Copper

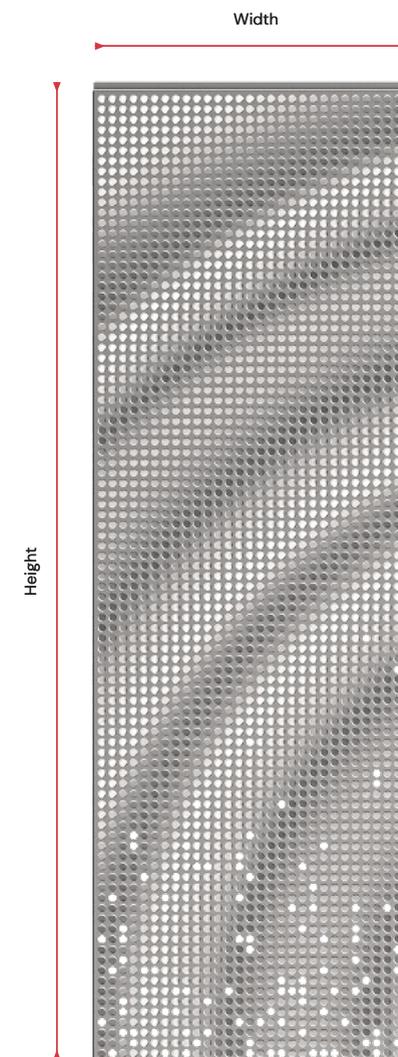

Gold

ASTYL selects alloys that ensure stability and precise light reflection. Metallic finishes maintain their integrity over time and integrate seamlessly with different architectural systems.

Panel specifications

Lock fixation

Custom designs integrate seamlessly into each project, offering a unique aesthetic. Manufactured from durable materials, Ombræ panels ensure agile installation and precise results across applications.

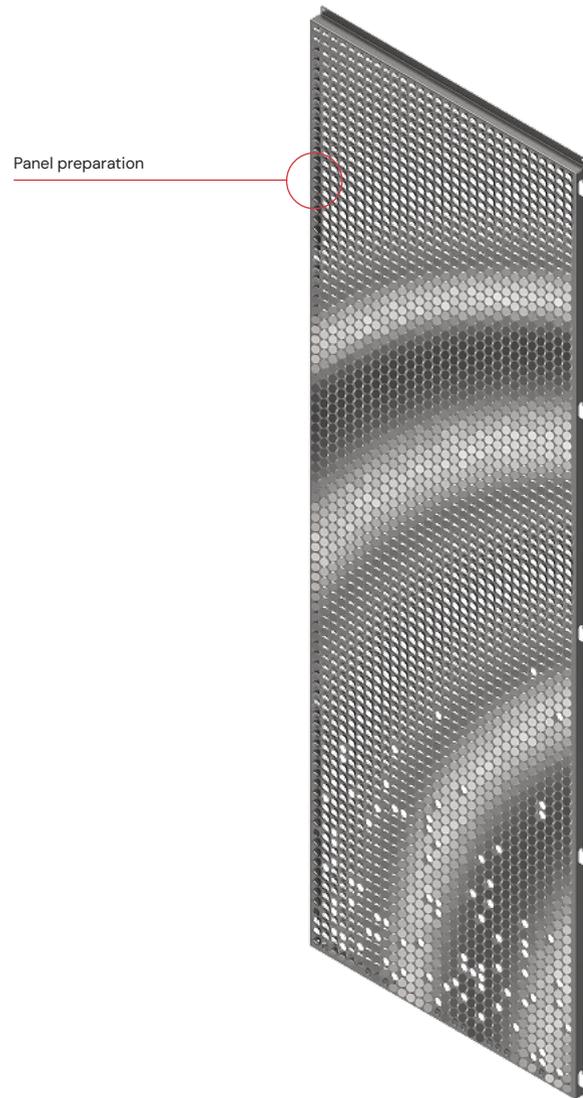

Model	Orientation	Dimensions	
B	Vertical	Width 1000 mm (39.37")	Height 1000 mm (39.37") - 2850 mm (112.20")

Installation system

Lock fixation

Panel

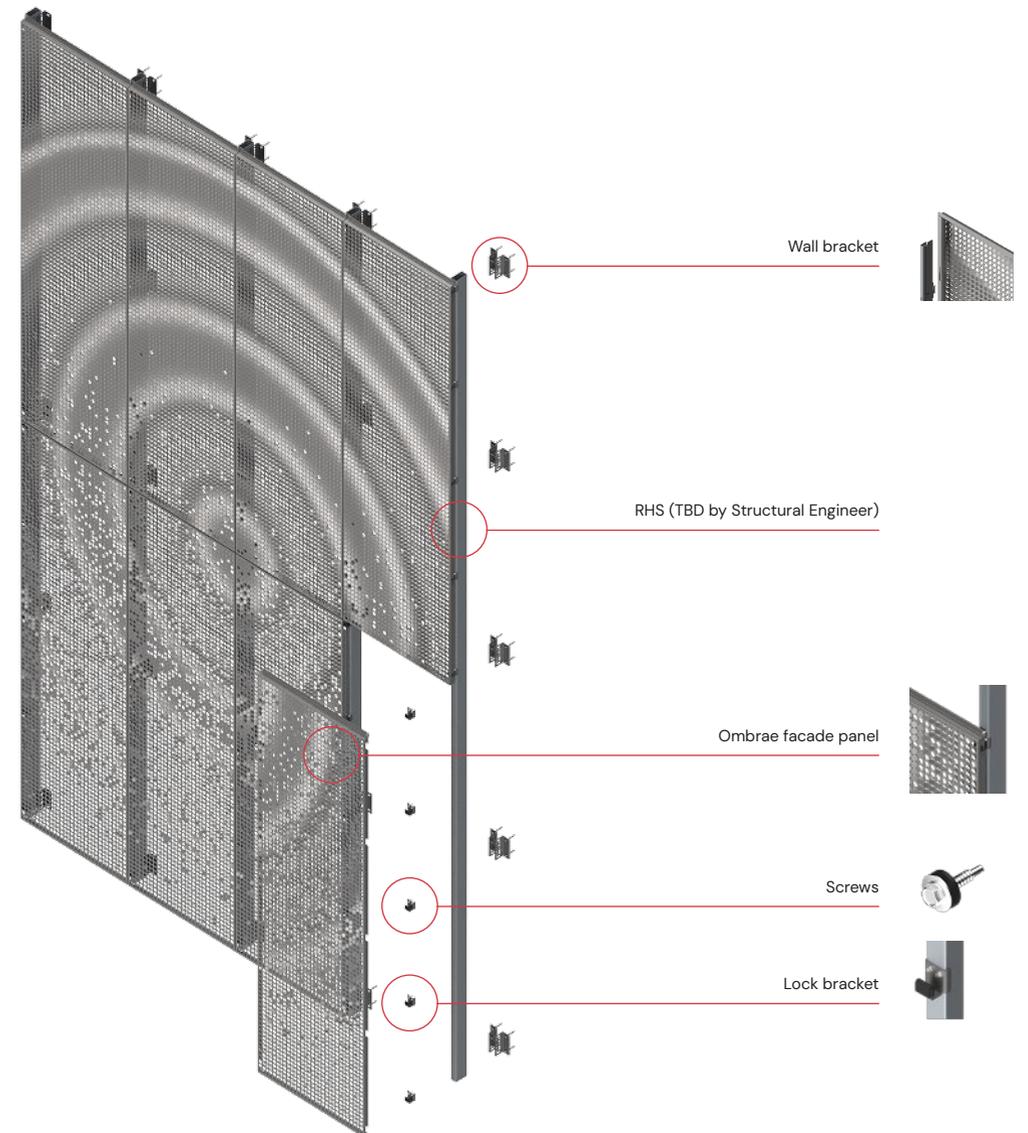

The lock system prioritizes the integrity of the selected design by integrating lateral preparations for discreet fixation.

Panel fixation uses Astyl's lock bracket system with self-drilling screws.

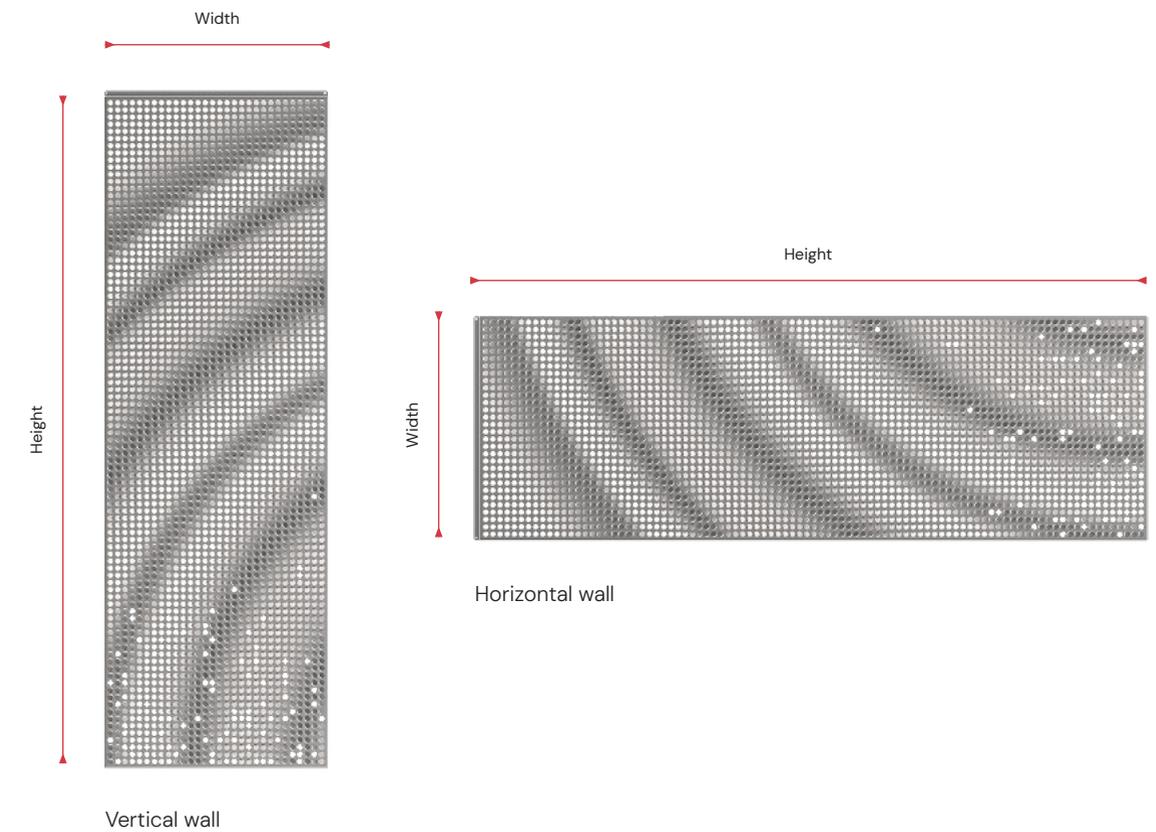

Moving parts

The system includes a wall-mounted support channel that receives anchors with integrated clips. It allows panels to be hung with precision, corrects misalignments, and maintains uniform alignment. Compatible with backlighting systems, it contains and diffuses artificial light for enhanced visual effects.

Panel specifications

Interlock fixation

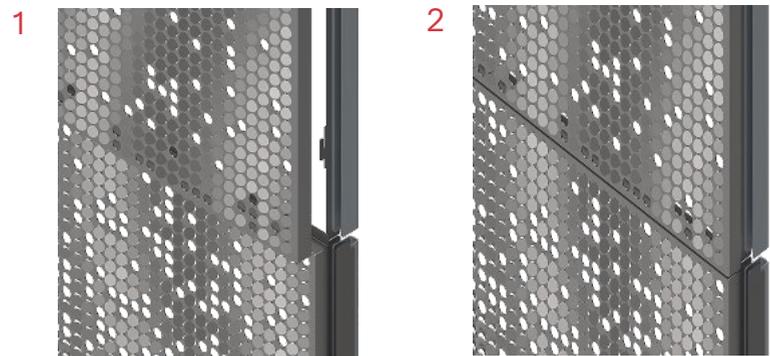

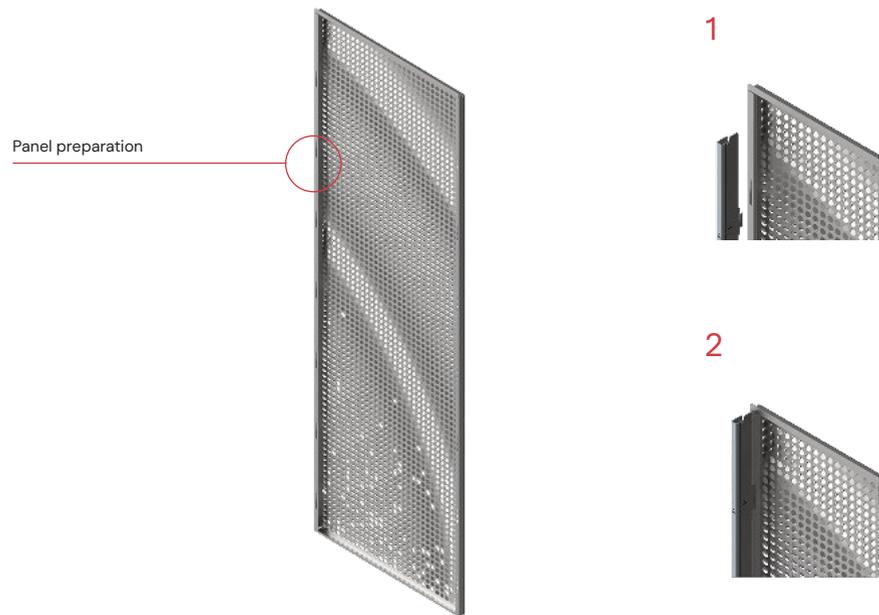

Model	Orientation	Dimensions	
		Width	Height
A	Vertical / horizontal	1000 mm (39.37")	1000 mm - 2850 mm
3'x3'	Vertical / horizontal	915 mm (36.02")	915 mm (36.02")
2'x4'	Vertical / horizontal	610 mm (24.02")	1220 mm (48.03")
2'x6'	Vertical / horizontal	610 mm (24.02")	1829 mm (72.01")
2'x8'	Vertical / horizontal	610 mm (24.02")	2440 mm (96.06")

Installation system

Interlock fixation

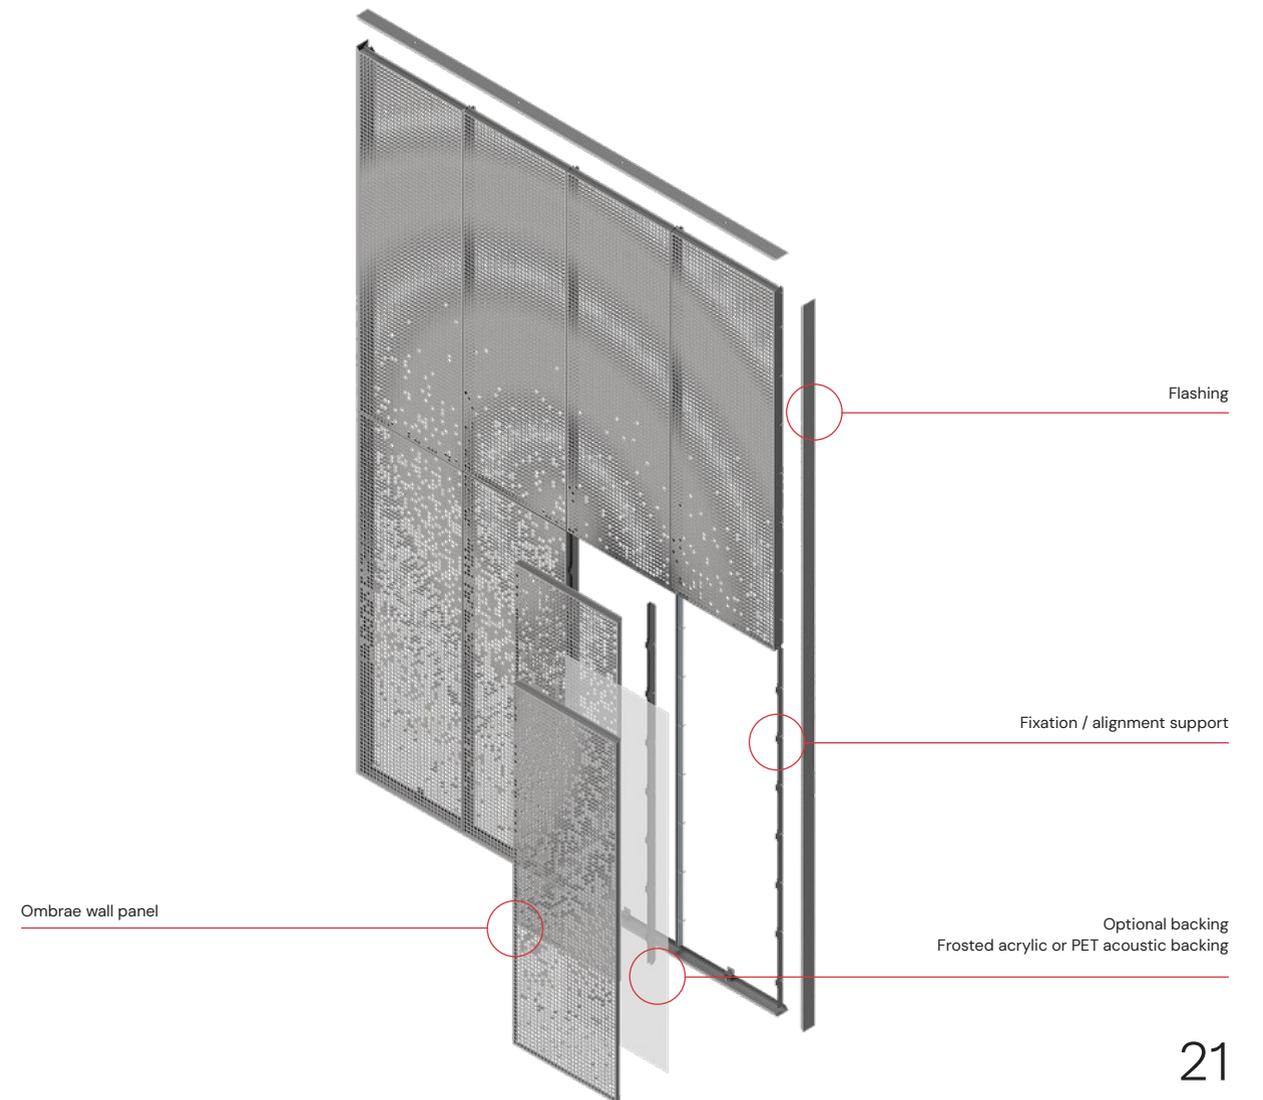

Panel

Designed for straightforward wall installation, with prefabricated rear perforations that allow fast and uncomplicated mounting.

Moving parts

The system includes a wall-mounted support channel with integrated clip anchors. It allows precise panel suspension, corrects surface irregularities, and ensures consistent alignment. Compatible with backlighting, it contains and diffuses artificial light.

Do you have a project in mind?

Let's discuss how to integrate Ombrae into your design.
